Codetopia Mentorship Program - 2026

Git & GitHub

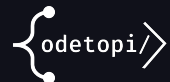

Week 1 Capstone
&
Project

My First Git Project

Capstone Goal

Demonstrate your understanding of:

- Git setup
- Repository initialisation
- Staging and committing
- Commit history
- Documentation discipline
- Developer workspace organisation.

Capstone Requirements

Documentation:

- README.md
- setup-notes.md
- git-states.md
- basic-commands.md
- reflection.md

setup-notes.md Must include

- Git installation verification
- Git configuration commands
- Git commands learned during Week 1

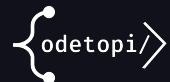

reflection.md Must Include

Answer the following:

- What are the 3 Git states?
- Why is Git useful?
- Why do commit messages matter?
- What did you learn during Week 1?

basic-commands.md Must Include

- Commands used to initialise a repo.
- Right commit messages when committing
- Command to check all commits
- Most personal used command in git and CLI

Capstone Requirements

Expected file structure:

```

Community

Capstone Requirements

Your repository must contain:

- Organized 8-week folder structure
- Screenshots stored correctly in them.
- Markdown documentation files

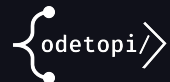

Capstone Project Requirement

Git workflow:

- minimum 8 commits
- meaningful commit messages
- clean `git log --oneline`
- at least one use of:
`git diff --staged`
- one corrected commit using:
`git commit --amend`

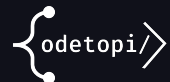

Capstone Brief

Requirement

- Repo has 3+ files with a logical folder structure
- At least 8 commits with clear, imperative-tense messages under 72 characters
- `git log --oneline` shows a clean, readable history — no 'fix' or 'asdf' messages
- At least one use of git diff to inspect a change before committing, also take a screenshot of this.
- Screenshot of git status showing a clean working tree at the end and staged files as well

Week 1 Project

- Initialise a new repo for a topic of your choice (recipes, movie list, travel wishlist, etc.).
- Create 3 separate files and commit each one individually with a descriptive message.
- Edit one file, stage it, then run `git diff --staged` before committing to inspect the change.
- Use `git log --oneline` to display a history of at least 5 commits and screenshot it.
- Write one commit with a mistake, then use `git commit --amend` to fix the message.
- Create a reflection.md file and answer the question from this [slide](#)
